#### **DETAILED ACTION**

### Inventorship

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

## **Priority**

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### Claim Objections

Claims 4 and 5 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim 4 should refer to other claims in the alternative only and/or cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 4 and 5 have not been further treated on the merits.

# Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Application/Control Number: 10/752,090

Art Unit: 3747

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fumio (JP 61-10644).

Fumio discloses a sintered alloy valve seat, monolithically formed by a sintering process, having a double layer structure consisting of a surface layer portion and a base layer portion. The surface layer portion includes a working face repeatedly knocked by a valve face, and the base layer portion is in contact with the bottom of a press-fitting hole of a cylinder head. The surface layer portion has a porosity of 5-20% and the base layer portion has porosity of 5% or less. The sintered alloy valve seat is fit for a cast-iron cylinder head. It would have been an obvious matter of design choice to modify the density and porosity of this reference in order to obtain optimal results. Moreover the claimed numerical ranges produce no new or unexpected result.

#### Allowable Subject Matter

Claims 6 and 7 are allowed.

Claims 2 and 3 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references by Kazuoka et al, Takagi et al, Maulik, Kuroishi et al, and Narasimhan et al all disclose valve seat for internal combustion engine.

Application/Control Number: 10/752,090

Art Unit: 3747
